Chapter 1

Introduction

Here is the public documentation for 3LawsRobotics Products.

Chapter 2

Robot Diagnostic Module

The **Robot Diagnostic Module (RDM) of 3LawsRobotics** is a powerful tool to gather analytics about your robot. It provides low level metrics such as CPU usage, signal delays but also high level safety critical metrics like safety envelope violation, planning inconsistency or sensor damage detection.

All of these metrics can be viewed on your web browser at 3laws.app.

In order to get your account setup and use freely this RDM, please contact contact@3lawsrobotics.com

This product is still at a Beta development stage. New features are developed every month and some breaking changes can still happened. The 3LawsRobotics Team is available to answer your question.

For now only a ROS1, ROS2 interface is available but we intend to extend the offer of possible interfaces in the near future with support for MavLink or MQTT for instance.
